Read the following passage and answer the questions based on it:

Superstition was disinherited when science revealed the laws of the universe and put man in his place. It was no discredit to be superstitious when all the functions of nature were unexplored, and man seemed the plaything of beneficent or sinister forces that he could neither control nor understand, but which held him in the hollow of their hand. He related everything that happened in nature to his own inexplicable existence, saw his fate in the clouds, his happiness or misery announced in the flight of birds, and referred every phenomenon of life to the soothsayers and oracles. You may read in Thucydides of battles postponed (and lost) because some omen that had no more relation to the event than the falling of a leaf was against it. When Pompey was afraid that the Roman would elect Cato as Praetor he shouted to the Assembly that he heard thunder and got the whole election postponed, for the Romans would never transact business after it had thundered. Alexander surrounded himself with fortunetellers and took counsel with them as a modern ruler takes counsel with his ministers. Even so great a man as Caesar and so modern and enlightened a man as Cicero left their fate to augurs and omens. Sometimes the omens were right and sometimes they were wrong, but whether right or wrong they were equally meaningless. Cicero lost his life by trusting to the wisdom of crows. When he was in flight from Antony and Caesar Augustus he put to sea and might have escaped. But some crows chanced to circle round his vessel, and he took the circumstance to be unfavourable to his action, returned to shore and was murdered. Even the farmer of ancient Greece consulted the omens and the oracles where the farmer today is only careful of his manures.
